Work Plan:

The following document summaries the last International Workshop foreseen by the REViSITE Project: The IAP Validation workshop. The workshop was focused on:

- Gathering feedback on the Implementation Action Plan (IAP) which was previously sent to the participants.

- Recommendation for Standardisation Proposals.

Executive summary:

The last REViSITE validation workshop, the Implementation Action Plan Validation workshop was held on the 9th of March 2012 in Paris, France, hosted by CSTB and organised by the entire Consortium.

The workshop lasted an entire day and saw the participation of 10 high level experts coming from industries, research centres and universities and from different European Countries. For more details about their affiliated institutions and expertise please refer to the full D4.3.1d.

The full day saw the consortium and experts working together in groups on some validation exercises in relation to the results developed within the Implementation Action Plan and about the standardisation proposals.

During the workshop the consortium also organised some quick poll questions to gather points of view about:

- REViSITE Framework validity

- Recommendations about standardisation proposals

- Barriers for standards implementation

Through the use of an electronic voting tool the consortium has been able to gather feedback in real-time and then to develop an analysis to define important inputs for the upcoming closure of the project.

The Consortium had the chance to validate, improve and finally define its inputs both in relation to the IAP and to the standardisation proposals.
